

GANGI
GERMICIDAL SYSTEMS

LINDO

Cutting edge germicidal
light products

New possibilities. Cutting-edge products. Proven germicidal UV-C and blue light technology.

Lindo is a Gangi Group company that develops cutting-edge disinfection products using proven germicidal UV-C and blue light technology. To develop new solutions we're working with Australia's leading scientific research authorities, including Swinburne University of Technology and The University of Melbourne.

Our products will revolutionise safety and wellbeing in the healthcare, defence and transport industries, by providing an automated, affordable, effective and sustainable method of disinfection. No harsh chemicals required.

UV-C and Bluelight systems

Fully-automated, safe & effective disinfection

Automated

Automated system with minimal input needed

Effective

Neutralises up to 99.99% of pathogens

Sustainable

No harsh chemicals required

Innovative

Backed by leading research organisations:

- Swinburne University of Technology
- The University of Melbourne
- The Peter Doherty Institute
- CSIRO

Cost efficient

Reduces procurement and resource costs

Australian made

100% Australian made and designed

Our Services & Solutions

We make it easy to keep your space clean and safe, with the first fully-automated UV-C and germicidal lighting system in Australia.

We offer an end-to-end service including:

- > Supply of germicidal UV-C and Bluelight systems.
- > Commissioning of UV-C germicidal light fittings & germicidal ECS and HVAC systems.
- > Installation of all systems.
- > Ongoing maintenance of systems as required.

A simple, one-off installation could save you thousands in cleaning expenses & help create a safer environment, reducing the spread of bacteria & viruses.

Our Products

Developed in collaboration with leading research organisations

Lindo's range of germicidal light products has been designed, developed and manufactured in Australia to revolutionise disinfection in the defence, health and transport industries.

They're safer, more affordable, more sustainable and more effective than the alternatives, and many of them are world-first solutions only available from Lindo.

Lindo Chamber*

Instant equipment disinfection

Portable instant disinfection for patient stretchers, military equipment & other items.

** International patent pending*

Lindo Light*

Automatic surface disinfection

Lindo Light is a collection of high-quality germicidal light fittings, designed and manufactured in Australia using patented Bluelight LED technology.

In development

Lindo Air*

HVAC and ventilation systems

Germicidal lighting installed into ECS and HVAC systems to automatically disinfect air and reduce the spread of pathogens.

Lindo Tube*

Germicidal lighting solution

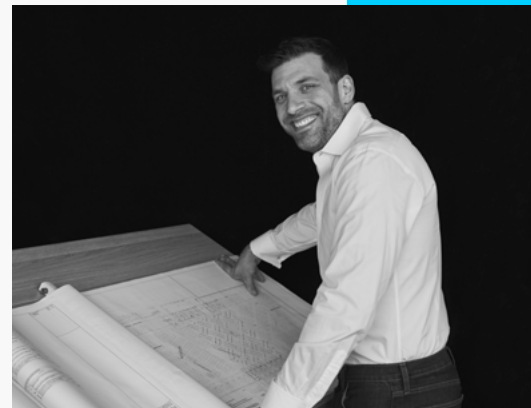

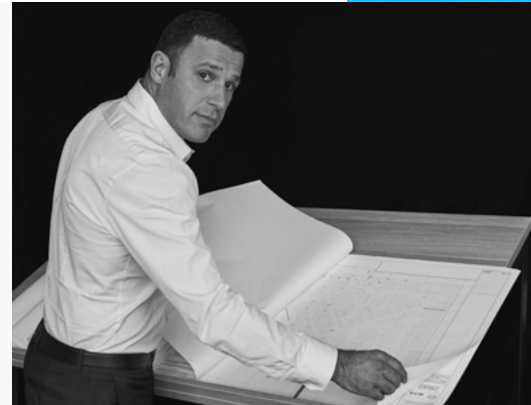

Linda Tube is a world-first germicidal lighting solution designed to significantly reduce the incidence of ventilator-associated pneumonia.

Who We Are

Gangi Germicidal Systems is part of the Gangi Group, a family-owned and operated business established over forty years ago.

The group started way back in 1978 when a hardworking fellow named Sebastiano Gangi started an electrical contracting company in South-East Melbourne. Word got round that he and his staff were trustworthy, reliable and diligent.

We started small but we're now operating nationwide in Australia and New Zealand.

Case Study

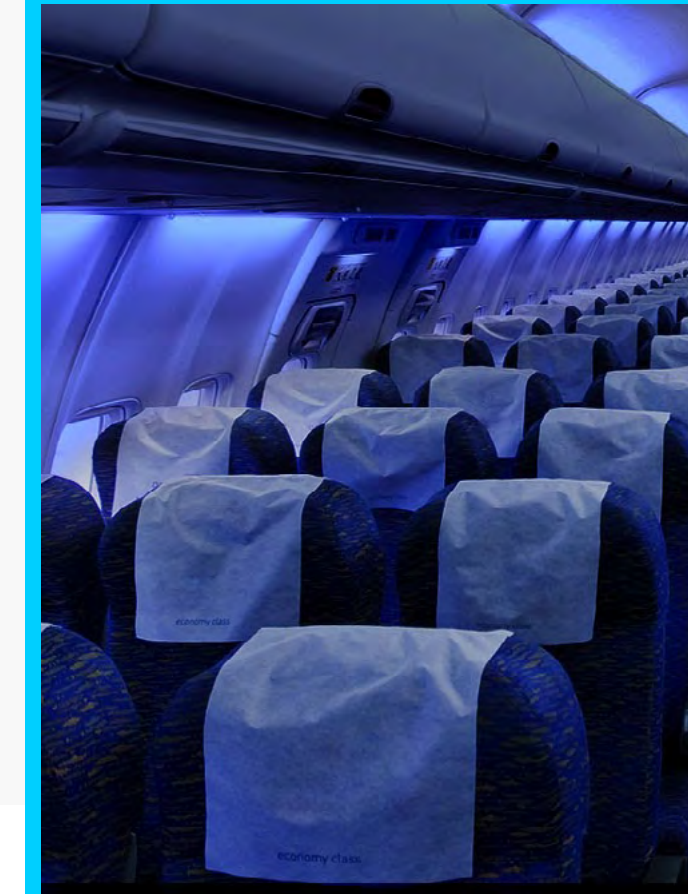

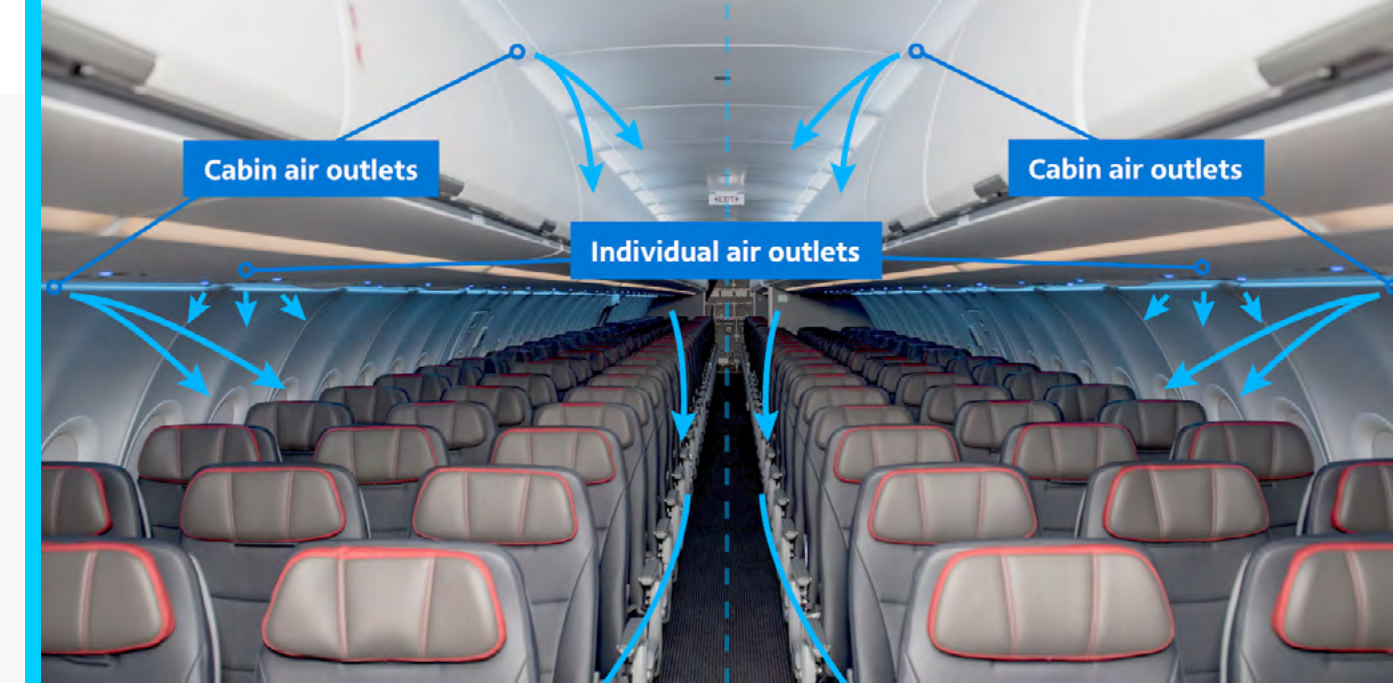

Aircraft Disinfection

Lindo Light and Lindo Chamber are ideally suited to closed-cabin environments.

Lindo Light and Lindo Chamber are ideally suited to Closed cabin environments. Our products enable fast, automated disinfection of all aircraft surfaces and equipment to reduce the spread of pathogens and keep occupants safe.

The time saving benefits of the technology are particularly significant - aircraft operators no longer have to manually disinfect surfaces and equipment, or purchase and use harsh, dangerous chemicals to disinfect.

The set-and-forget technology is easy to use, requiring little to no input - perfect for fast paced environments.
